

1

Multiple choice 1 point Question

What is the main reason to express sequential tags using the BIO (or also called IOB) format over only providing the class name?

- ☒ The IOB format can better express the boundaries of an entity or chunk
- ☐ The IOB format is easier to interpret for machines
- ☐ The IOB format is easier to read
- ☐ all of the above

2

Multiple choice 1 point Question

What is the effect of metonymy for named entity classification?

- ☒ The same name is used for different types such as locations, people and governments
- ☐ Parts of entities are being referred to
- ☐ Metonymy is not relevant for detecting the type of entity
- ☐ Locations can be ambiguous because they have the same name

3

Multiple choice 1 point Question

Why is it important to create balanced evaluation data sets for NLP research?

- ☒ When an evaluation data set does not contain a realistic sample of the linguistic phenomenon, it doesn't allow one to measure a system's performance on that phenomenon adequately.
- ☐ When a dataset is not balanced it doesn't adequately reflect the linguistic phenomenon it purports to represent.
- ☐ When an evaluation data set is not balanced, it is too small to measure the system performance
- ☐ Unbalanced evaluation data sets provide too little information for training a supervised NLP application.

4

Multiple choice 1 point Question

What can be considered a referring expression in Named Entity Recognition and Classification (NERC)?

- ☐ Only proper nouns, such as person or organization names
- ☒ Common noun phrases, pronouns, and in some cases, verbs, verb phrases, and adjectives (e.g., for events and properties)
- ☐ Only adjectives that describe entities
- ☐ A communicative act to identify an entity

5

Multiple choice 1 point Question

What is the key difference between Named Entity Recognition (NER) and Named Entity Classification (NEC)?

- ☐ NER assigns entity types such as person, location, or organization, while NEC involves identifying phrases that refer to named entities
- ☒ NER involves identifying phrases that refer to named entities, while NEC assigns entity types such as person, location, or organization
- ☐ NER deals with proper nouns, while NEC focuses on common nouns
- ☐ NER recognizes the context of an entity within a sentence, while NEC focuses on the structure of the entity itself

6

Multiple choice 1 point Question

Which of the following features can be used in Named Entity Recognition and Classification (NERC)?

- ☐ Word-level features
- ☐ Lookup features
- ☐ Document & corpus features
- ☒ All of the above

7

Multiple choice 1 point Question

Which of the following is an example of ambiguity in Named Entity Recognition (NER)?

- ☐ "New York, "NY", and "The Big Apple" referring to the same location
- ☐ "Holland" and "The Netherlands" used as metonyms for the same country
- ☐ "Paris" as a location vs. "Paris" as a person
- ☒ "Apple" referring to the organization vs. "apple" as a fruit

8

Multiple choice 1 point Question

The representation 'xxxXx' for the word 'spaCy' is an example of which of the following features?

- ☐ Case feature
- ☒ Word shape feature
- ☐ Character n-gram feature
- ☐ Digit pattern

9

Multiple choice 1 point Question

Which of the following typically **does not** serve as a feature for token-level classification?

- ☐ Lemma of the next word
- ☐ POS tag of the previous word
- ☒ Length of the current word
- ☐ IOB tag of the previous word

10

Multiple choice 1 point Question

Which of the following factors **does not** impact performance for Named Entity Recognition and Classification (NERC)?

- ☒ Text font size
- ☐ Amount of training data
- ☐ The annotation of the spans
- ☐ Genre of text
